

43-2

Product features

The GasIQ Model 43-2 is a robust burner system designed for use with various fuel gases such as acetylene and propane along with oxygen. The system is suitable for cutting, heating and soldering.

Main components:

- **Torch handle:** Central component of the 43-2 system, compatible with various welding, cutting and soldering inserts.
- **Modular system:** Flexible structure where the user can select individual components based on the task

Cutting inserts:

- Equipped with lever valve for cutting oxygen.
- Nozzle mounts with 90° angle.
- Robust construction to withstand stress in harsh environments.

Nozzles:

- Made of copper for efficient heat dissipation.
- Includes multiple high capacity heating nozzles.

Compatibility: All components are interchangeable with corresponding burner systems on the market.

Technical data

Type	Cutting torch
Principle	Injector
Standard	ISO 5172
Fuel gas	AC / Propane(LPG)

Materials:

Front piece	CW 617N
Back piece	CW 617N
Handle	CW 508L
Tube	AISI304L
O-rings	VMQ/MVQ/ NBR
Shut-off valve	CW 614N/ AISI 420/ PTFE
